HEALTH OFFICER'S REPORT.

SAN FRANCISCO, July 1, 1896.

*To the Honorable the Board of Supervisors
Of the City and County of San Francisco—*

GENTLEMEN: In submitting this my annual report of the Health Department for the fiscal year ending June 30, 1896, it is my earnest desire to call the attention of the Board of Health and the public to some of the most urgent needs of the Health Department. A reform and general revision of some of the old methods which have so long prevailed and the introduction of the new methods which conform to the requirements and teachings of modern sanitary science is what is needed here at the present time. San Francisco has reached a critical period in her health history, a fact which is emphasized by the events of the past year and the demands of the present moment.

A city which in its infancy is endowed with the most favorable climatic and topographical conditions, with an atmosphere remarkable for its high average of dryness and purity, with a soil which possesses the characteristic essential to free and rapid drainage, with water sources which in their original quality and quantity guarantee a safe supply for generations to come, and with a possible area which admits of active extension without the coincident danger of early overcrowding—such a city is apt, in the plenitude of its sanitary advantages, to pass through its early stages of growth and to develop into a metropolis before it awakens to a recognition of the truth that this heritage is exhaustible, that its credits are of necessity encroached upon in the course of time, and that ultimately, for the preservation of its health interests, it must throw around them the protective agencies of modern sanitary science.

San Francisco at the present time finds herself in such a position. She has such an inheritance to boast, and she has a past of such reckless reliance upon her natural advantages to repent. She is faced with such a necessity for sanitary reform. Her people have come to a point where they cannot ignore the fact that the chemistry of nature is no longer sufficient; that earth, air and water are suffering pollution from the accumulated waste products of human and animal life and from the remains of human and animal dead.

The rapid growth of the population, multiplication of factories, mills and slaughter houses, and of apartments and tenement buildings, the progressively increasing number of vaults, garbage pits and cesspools, the inclusion of cemeteries within the city limits, each and all contribute to this result. Village methods have been perpetuated under metropolitan conditions. Sanitary improvements have not kept pace with natural progress, and the health record of the city suffers in consequence.

Recognizing this condition of affairs to be true, it becomes the duty of the health authorities to carefully consider the needs of the hour. While we may sympathize with the popular idea of retrenchment at this stage of our municipal affairs, we must realize that the health interests of a large city cannot be sustained upon the financial basis which was ample for their support twenty years ago. The truest economy suggests some degree of active expenditure toward those natural health conditions which have done so much to give the city its prestige of the past.

Artificial must be rapidly substituted for natural drainage; the vault and cesspool must be abandoned for the closet and the sewer; modern sanitary plumbing and ventilation must be required. The sewage must be diverted from its deleterious duty of polluting our soil, and must be conveyed to points of discharge into the bay. Animal and vegetable refuse must be destroyed by fire rather than by the tardy process of chemical decomposition. Our food supplies should be subject to careful inspection in the stockyard, the dairy, the bakery and the places of sale. All these reforms press with persistent urgency upon us.

The present Board of Health have endeavored to establish sanitary reforms and modern methods of inspection, and considering the apathy of the public and the active opposition of some of the press and a majority of the Board of Supervisors, they are to be congratulated on the success they have achieved. One of the most important innovations that has been established by the present Board of Health is the system of milk and dairy herd inspection that is now being so successfully carried out.

The amount of adulterated milk that was found and the large number of tuberculous cows that were revealed by the tuberculin test was a surprise and shock to the public, and has demonstrated beyond a doubt the absolute necessity for a continuance of this inspection. This cannot be carried out, however, without the expenditure of a considerable outlay, comprising a sufficient force of inspectors, a veterinary surgeon, a bacteriologist, chemist and a properly equipped laboratory for chemical and bacteriological work.

The health inspection service of the department is entirely inadequate for anything like thorough or effective work. The number of inspectors employed on this service is six, and their time is mostly taken up investigating complaints that are made by citizens at this office and in abating nuisances that come under observation in their respective districts. Nothing like a systematic house to house inspection under the present conditions is possible. The number of inspectors in this department should be increased

so that in certain portions of the city a thorough and systematic house to house inspection could be instituted and a rigid enforcement of the sanitary laws be required in certain localities in this city, notably Chinatown, and the section known as the Latin quarter, and the cheap and over-crowded lodging and tenement houses, located for the most part on the south side of Market street. Many of these houses are in a deplorable condition and are utterly unfit for human habitation, reeking with filth, without any ventilation and worn-out and defective plumbing. These houses should be condemned and torn down.

In the Chinatown and Latin quarter districts there is an immense amount of work that should be done. Many of the houses should be condemned and torn down. The underground cellars in Chinatown, into which the light of day never enters, and in which there is no ventilation whatever, are occupied and used as opium smoking dens and sleeping quarters by hordes of Chinese. The owners of these places should be forced to close them, if necessary, by filling them up with earth. The plague spot known as Chinatown, and located in the choicest part of this city, should be entirely abolished, and with the necessary force of inspectors at my disposal I would gladly undertake the accomplishment of this event.

I have only referred in detail to a few of the reforms and nuisances that might be mentioned. The last few months, I am happy to say, has seen the solution of some of these problems, but the greater part remains to be solved. The history of the sanitary events of the past year will, I trust, hasten the solution of many of the problems that now confront us

The deaths numbered 5,966, as against 6,059 for the corresponding term of last year. The classification of diseases is as follows:

I—Zymotic, 472.	II—Constitutional, 1,460.
III—Local, 3,068.	IV—Developmental, 581.
V—Violent deaths, 383.	V—Unascertained, 2.

Very respectfully,

A. S. LOVELACE, M. D.,
Health Officer.

INDEX OF MORTALITY TABLES AND DEPARTMENT REPORTS ACCOMPANYING HEALTH OFFICER'S REPORT.

TABLE No.

1. Monthly distribution of mortality in San Francisco for 25 years.
2. Mortality in San Francisco for 25 years arranged according to classes.
3. Estimated population, deaths and death-rate of San Francisco for 25 years.
4. Mortality in San Francisco from all causes registered during the year ending June 30, 1896.—Appendix Tables 1, 2, 3, 4, 5, 6 to Table IV.
5. Mortality in San Francisco for 25 years arranged according to classes (Mongolian).
6. Estimated population, deaths and death-rate for 25 years (Mongolian).
7. Sex and nationality of decedents.
8. Ages of decedents in the different months.
9. Localities of mortalities for each month.
10. Monthly distribution of mortality.
11. Monthly distribution of mortality from zymotic diseases.
12. Twenty of the principal causes of death during calendar year 1895.
13. Statement of marriages, births and mortality for fiscal years 1890-91, 1891-92, 1892-93, 1893-94, 1894-95, 1895-96.
14. Births, marriages, deaths and population for the last 25 years.
15. Interment permits for fiscal year.
16. Deaths registered during calendar year 1895.
17. Meteorological observations during year ending June 30, 1896.
18. Disinterments and fees collected for year ending June 30, 1896.
19. Disinterment account for year ending June 30, 1896.
20. Salaries of Health Department for year ending June 30, 1896.
21. Expenses of Health Office for year ending June 30, 1896.
22. Fees collected for certified copies of births and deaths.
23. Comparative table of twenty principal causes of death.
24. Master plumbers' list.
25. Plumbing Inspector's report.
26. Assistant Plumbing Inspector's report.
27. Market Inspector's report.
28. Six Health Inspectors' reports.
29. Report of City Bacteriologist.
30. Report of City Chemist.
31. Superintendent City Cemetery report.
32. Disinterment Inspector's report.
33. Quarantine Officer's report for year ending June 30, 1896.
34. City Physician's report for year ending June 30, 1896.
35. Police Surgeon's report for year ending June 30, 1896.
36. Superintendent City and County Almshouse report for year ending June 30, 1896.
37. Superintendent City and County Hospital report for year ending June 30, 1896.

DIAGRAM SHOWING TWENTY PRINCIPAL CAUSES OF DEATH.

PLUMBING INSPECTOR'S REPORT.

SAN FRANCISCO, July 1, 1896.

A. S. Lovelace, M.D., Health Officer—

DEAR SIR: I herewith submit my report as Plumbing Inspector for the fiscal year ending June 30, 1896:

Number of plans submitted.....	914	Number of inspections in construction..	1,116
Representing houses	1,006	Number of inspections on completion ..	883

Representing the following classes of buildings:

Private houses, one family.....	358	Churches.....	2
Apartment flats for two families	246	School-houses.....	2
Apartment flats for three families	92	Club-houses	2
Stores and flats.....	69	Factories.....	4
Stores and office buildings	10	Stables.....	3
Stores and rooming houses	25	Railroad car houses.....	2
Stores.....	26	Additions and alterations.....	119
Hotels and lodging-houses.....	5	Engine houses, S. F. F. D.....	7
Public halls	1	Apartment flats for four or more families	29
Warehouses	3	Parrott Building.....	1

I respectfully call your attention to the performance of the work of this department in the construction of plumbing in new buildings. I have done all in my power to enforce the rules as strictly as possible, and at the same time treat every one justly. With the exception of a few cases, no difficulties have been encountered. The plumbers in most instances did what they knew to be their duty, and thus assisted me. Two or three arrests were made, and several times work had to be torn out and reconstructed; but only in a few cases was stubbornness exhibited on the part of the plumbers in their refusal to do the work properly.

From my experience I concluded that many additions and alterations could be made in the rules, and I accordingly compiled a new set, which have recently been adopted by the Board of Health. The adoption of these rules involves more work on the employes of this department, and also adds to a great extent to the duties of the Secretary, Mr. Edmond Godchaux.

The late rules applied only to plumbing in new buildings; while those recently adopted

apply to plumbing work in all buildings, whether new or old. The proper enforcement of these rules will require an increase in the number of assistants. In the majority of cases it involves no more expense to do work in compliance with these rules than it did before their adoption. They have received the hearty indorsement of all fair-minded and honest plumbers.

In conclusion, I must not forget the valuable assistance rendered me by the Assistant Plumbing Inspector, Mr. Thomas McGrath, and also thanking you kindly for the assistance rendered this department, I am,

Yours respectfully,

JOHN J. SULLIVAN,

Plumbing Inspector.

ASSISTANT PLUMBING INSPECTOR'S REPORT.

SAN FRANCISCO, July 1, 1896.

A. S. Lovelace, M.D., Health Officer:

DEAR SIR: Herewith please find report of Assistant Inspector of Plumbing and Drainage for the fiscal year ending June 30, 1896:

Number of feet iron-stone sewer inspected	4,730
Number of feet cast-iron sewer inspected.....	62,665
Number of traps at curb of sidewalk inspected	533
Number of inspections made.....	1,547

Respectfully submitted,

THOMAS McGRATH,
Assistant Inspector of Plumbing and Drainage.

CHIEF MARKET INSPECTOR'S REPORT.

SAN FRANCISCO, CAL., July 1, 1896.

To the Honorable the Board of Health—

GENTLEMEN—The past fiscal year has been an extremely busy one for this branch of the Health Department. In addition to my regular duties as inspector of meats, markets, etc., I have, in conjunction with the Milk Inspector, made an examination of the various dairies; inspected poultry as it arrived at the railroad yards, and fruits brought to the city by transportation companies. Many thousands of pounds of shark, which were offered for sale as halibut, have been seized by my assistants and myself. In this particular case, the dealers were ignorant of the fact that they were violating the laws, as the law had never before been enforced.

Under the direction of your Honorable Board, the cows in the Alms House have been inspected, and thirty-one having been found to be afflicted with tuberculosis, were killed. Other ranches have been inspected and the cows subjected to the United States Tuberculin test. Where consumption has been found by the Milk Inspector and myself, the cattle have been condemned and killed.

I would respectfully call the attention of your honorable body to the present poor and inefficient laws governing this branch of the service. They are far below any of the various eastern cities in regard to the thorough inspection of meats and markets, and are lacking in all the essential points at present included in the market laws adopted by these Eastern cities. With a new set of laws, placing this city on a par with those in the east, my assistants and myself could do much more efficient service, in spite of the well known fact that it is almost an impossibility for such a small force to watch every point throughout the city suspected of being an ingress for poor meats. I would also recommend that the board pass an order prohibiting the hanging of meats outside of markets in this city. The reason for this is that the meats become impregnated with the dust from the streets, and in some cases, with the germs of disease. In the poorer sections of the city this is quite noticeable. Such regulations are now in force in Eastern cities.

All of which is respectfully submitted.

BEN. DAVIS,
Market Inspector.

Total number of markets inspected during the year.....	2,861
Total number of restaurants inspected during the year.....	54
Total number of bakeries inspected during the year.....	12
Total number of vegetable stands inspected during the year.....	241
Total number of poultry places inspected during the year.....	123

We have made twenty-one arrests during the year, out of which seventeen were convicted; the others were dismissed on technicalities.

Respectfully submitted,

BEN DAVIS,

Chief Market Inspector.

J. L. RIVER,

A. D. TURNER,

WM. H. JORDAN,

Assistant Inspectors.

HEALTH INSPECTORS' REPORTS.

REPORT OF HEALTH INSPECTOR, DISTRICT No. 1.

SAN FRANCISCO, July 1, 1896.

*To the Honorable the Board of Health
Of the City and County of San Francisco—*

GENTLEMEN: I hereby submit my report for District No. 1 for the fiscal year ending June 30, 1896:

Number of complaints filed during year.....	696
Number of complaints abated.....	570
Number of complaints, no cause.....	93
Number of complaints referred to other departments	24
Number of complaints unabated	9
	696
Number of cases diphtheria reported	18
Number of cases scarlatina reported.....	12
	30
Number of fumigations.....	31

Respectfully submitted,

DAVID FAY,
Health Inspector, District No. 1.

REPORT OF HEALTH INSPECTOR, DISTRICT No. 2.

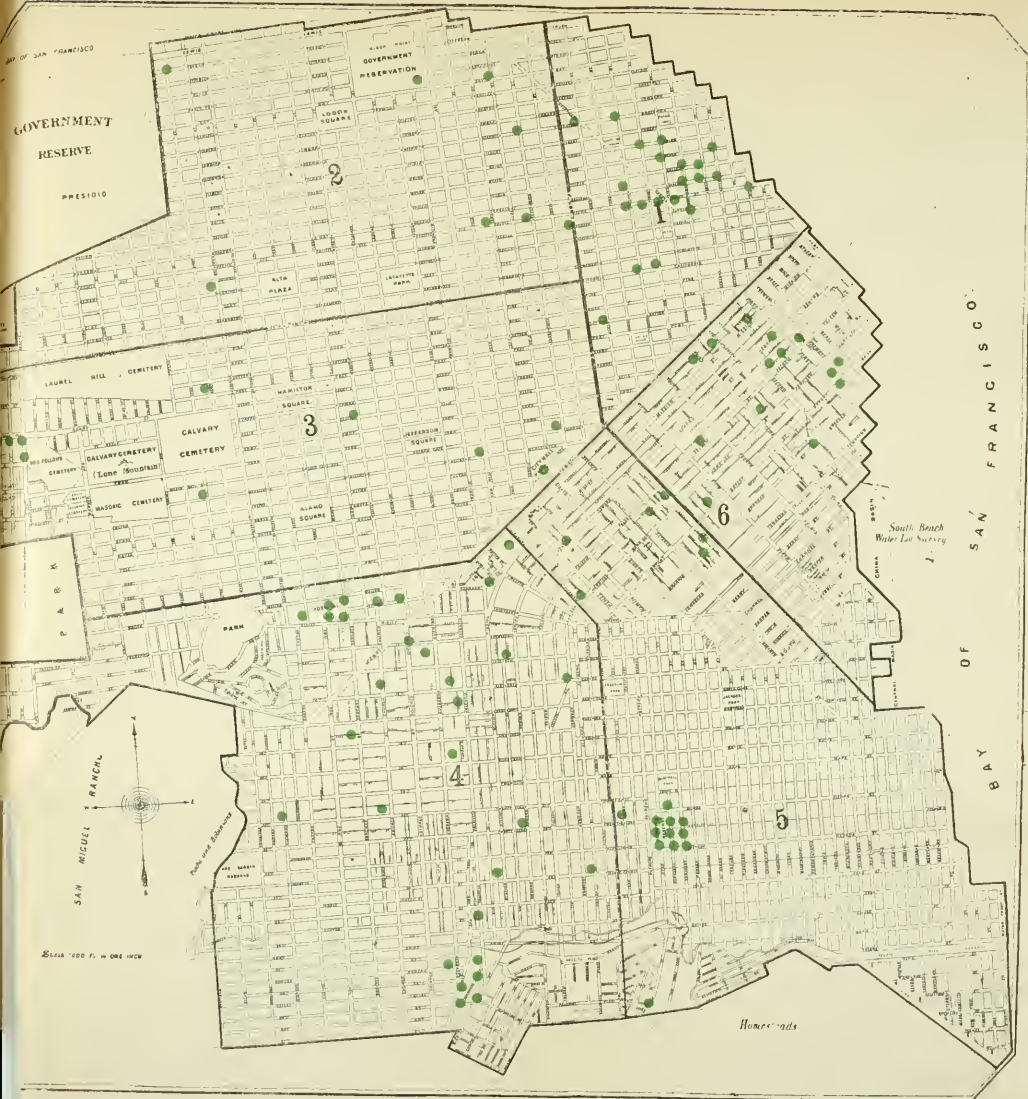

SAN FRANCISCO, July 1, 1896.

*To the Honorable the Board of Health
Of the City and County of San Francisco—*

GENTLEMEN: I hereby submit my report for District No. 2 for the fiscal year ending June 30, 1896:

Number of complaints filed during year.....	392
Number of complaints abated.....	275
Number of complaints, no cause.....	103
Number of complaints referred to other departments.....	14
	392

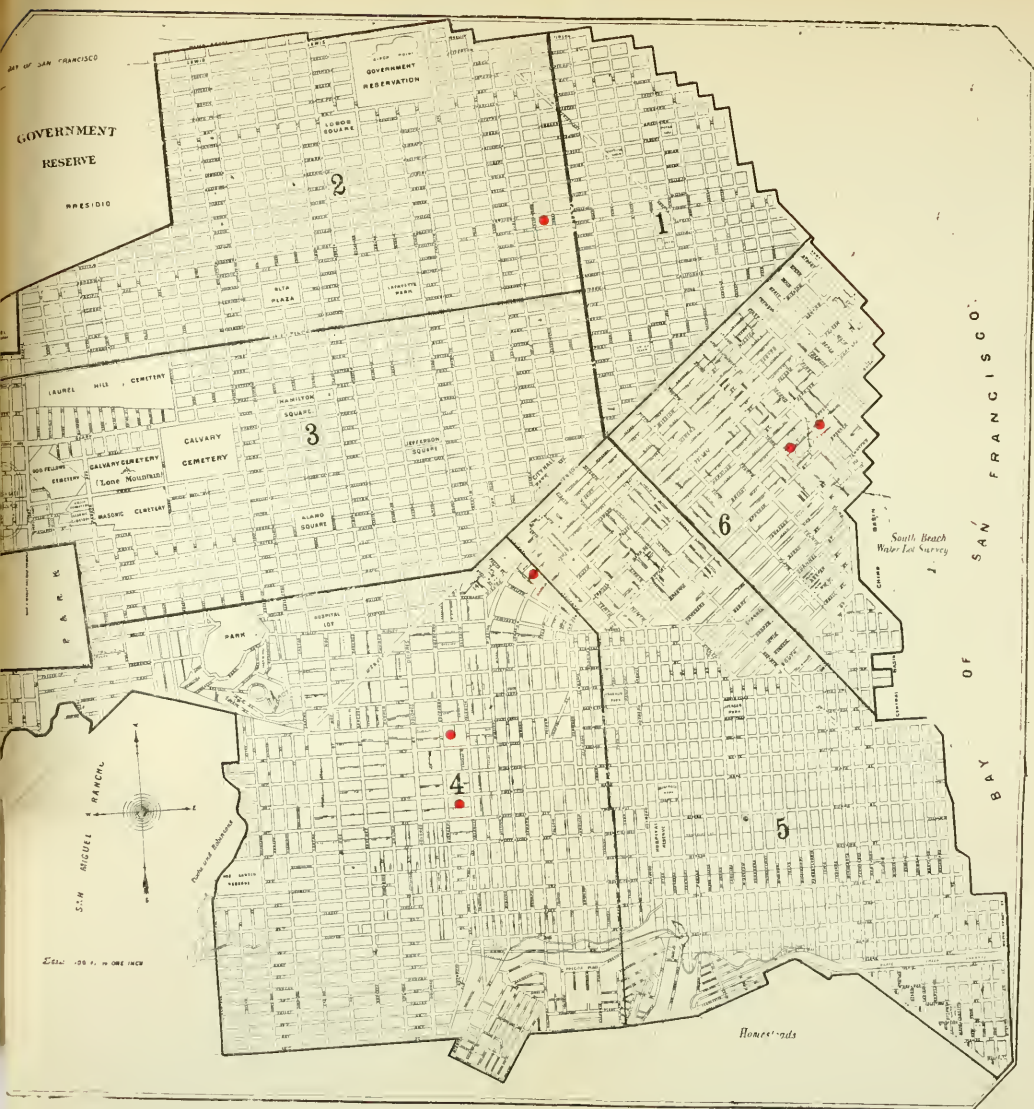

TYPHOID FEVER.

Map showing localities of deaths from Scarlatina during Fiscal Year. Total number of Deaths, 6.

DIPHTHERIA.

Map showing localities of deaths from Diphtheria during Fiscal Year. Total number of Deaths, 19.

Number of cases diphtheria reported.	13
Number of cases scarlatina reported.	5
	<hr/>
	18
Number of fumigations.	18

Respectfully submitted,

OTTO LUDERS,
Health Inspector, District No. 2.

REPORT OF HEALTH INSPECTOR, DISTRICT No. 3.

SAN FRANCISCO, July 1, 1896.

*To the Honorable the Board of Health
Of the City and County of San Francisco—*

GENTLEMEN: I hereby submit my report for District No. 3 for the fiscal year ending June 30, 1896:

Number of complaints filed during year.	620
Number of complaints abated.	492
Number of complaints, no cause.	85
Number of complaints referred to other departments.	29
Number of complaints unabated.	14
	<hr/>
	620
Number of cases diphtheria reported.	22
Number of cases scarlatina reported.	11
Number of cases of typhoid fever reported.	10
	<hr/>
	37
Number of fumigations.	37

Respectfully,

A. T. PATTON,
Health Inspector, District No. 3.

It would appear on its face that, contrasting this report with that of my predecessor, the latter had accomplished much more. An examination of his reports on work done shows that he counted complaints of "dead anima's" and "contagious diseases" (amounting to much over one hundred in number) among the list of "complaints filed." In this report "dead anima's" are not noted, and contagious diseases are separate.—A. T. P.

REPORT OF HEALTH INSPECTOR, DISTRICT No. 4.

SAN FRANCISCO, July 1, 1896.

*To the Honorable the Board of Health
Of the City and County of San Francisco:*

GENTLEMEN: I hereby submit my report for District No. 4 for the fiscal year ending June 30, 1896:

Number of complaints filed during year.....	683
Number of complaints abated.....	532
Number of complaints, no cause.....	89
Number of complaints referred to other departments.....	41
Number of complaints unabated.....	21
	<hr/>
Number of cases diphtheria reported.....	23
Number of cases scarlatina reported.....	29
Number of cases typhoid fever reported.....	15
	<hr/>
	72
Number of fumigations.....	52
Laundries examined and found in a sanitary condition (not included in above number of nuisances).....	56

Much time has been spent investigating hog rauches and getting them condemned, which has resulted in an ordinance passed by the Board of Supervisors removing them from certain limits six months from date of its passage.

Respectfully,

W. H. DUREN,
Health Inspector, District No. 4.

REPORT OF HEALTH INSPECTOR, DISTRICT No. 5.

[SAN FRANCISCO, July 1, 1896.]

*To the Honorable the Board of Health
Of the City and County of San Francisco—*

GENTLEMEN: I herewith most respectfully submit my report for the fiscal year ending June 30, 1896.

It will be observed that in the tables given herein the statement of the work done between July 1, 1895, and August 15, 1895, is segregated. This was done for the reason that prior to August 15th (at which time I was installed), the records of my predecessor show nothing as to what was done in abating complaints, except the word "Abated," written across the original entry. I therefore deemed it expedient, in order to clearly show what had been done under the present administration, that such a segregation be made.

Of the 498 complaints filed from August 15, 1895, to July 1, 1896, 234, or about 45 per cent were filed at the Health Office by citizens, while 264, or about 55 per cent, were discovered by going out into the District and looking for them.

Of the 234 complaints filed by citizens 45 were anonymous, and 79 of them, or about 33 per cent, proved to be without sufficient cause for action; hence only about 37 per cent of the actual work done was initiated by the complaining citizen.

In classifying the complaints in Table No. 1, I have been obliged to be more or less arbitrary, as many complaints contain a number of items each; hence I have endeavored to group them under such terms as would most fully embrace the complaint. For instance, a complaint which enumerates a wooden sewer, an open privy vault, a sink not trapped and rotten planking in yard, would be placed under the term, "Defective Plumbing." In Table No. 3 these various items would be found under the appropriate headings, and while this table does not by any means include all the work done in abating the 471 complaints enumerated, it serves to show the nature and extent of said work.

During the period covered by this report, 20 arrests have been made, but in most cases the persons were allowed to go without prosecution, after they had complied with the rules.

A very important sanitary measure effected has been the draining of Mission Bay mud flats, situated south of Channel street and west of Kentucky street. A 24-inch iron pipe was put in by the Southern Pacific Company across Kentucky street, near Merrimac. This pipe is provided with a gate operated so as to draw off the stagnant water at low tide and admit the salt water at high tide.

HEALTH OFFICER'S REPORT.

TABLE No. 1.

SHOWING TOTAL NUMBER OF COMPLAINTS FILED DURING THE YEAR,
CLASSIFIED.

COMPLAINT	July 1, 1895, To Aug. 15, 1895.	Aug. 15, 1895, To July 1, 1896.	Total.

Number of fumigations.....	53

Respectfully,

GEORGE H. STOUT,
Health Inspector, District No. 6.

REPORT OF CITY BACTERIOLOGIST.

SAN FRANCISCO, July 1, 1896.

*To the Honorable the Board of Health**Of the City and County of San Francisco—*

GENTLEMEN: The annual report of your Bacteriologist will comprise a brief resumé of the work performed by him during the nine months of his incumbency, and certain recommendations for the better and more efficient conduct of this branch of the Health Department.

The reports rendered during the period previous to the issuance of the improved form of monthly report were not obtainable; hence it is not possible to give them more in detail than to state that the work consisted chiefly in the examination, microscopically, qualitatively and quantitatively, of between fifty and one hundred samples of milk seized by the Milk Inspector, Mr. Dockery. As a result, the findings in the majority of the specimens were the chief evidence in securing the conviction and punishment of the purveyors of impure and adulterated milk.

Various specimens of suspected food products, chiefly meat or diseased animal tissues, submitted by the Market Inspector, Mr. Davis, were also examined. An examination of the drinking water from the various sources of supply, as well as a personal inspection of the manner and method of its collection and distribution, was made and duly submitted to your Honorable Board.

Owing to the fact that the Health Department possesses absolutely nothing in the way of equipment for bacteriological work, the incumbent has availed himself of the generous courtesy of Dr. M. Herzstein, of this city, in the use of his bacteriological laboratory for the preparation of the various culture-media and access to the necessary apparatus for the carrying on of bacteriological examination. The complete equipment of this laboratory has placed no restriction on the labors of your Bacteriologist. Various advisory communications relative to the use of tuberculin and the establishment of stations for the distribution of the materials for the accurate diagnosis of diphtheria, both by letter and in person at Board meetings, are also on file.

Fortunately, our city is remarkably free from that dread scourge of infancy, diphtheria. There is a sufficient number of cases, however, to warrant the equipment of distributing points for sterilized swabs, a printed list of which should be sent to every physician in the city and county; thus the least possible time will be lost between the discovery of a suspected case of diphtheria and the absolute and positive bacteriological diagnosis, either affirmative or negative. By way of comparison, the Bacteriological Division of the Health Department of New York city is regarded as one of the most important, if not the most important, branch of the service.

Ample appropriation is made, commensurate with the recognized invaluable aid of the Bacteriological Department, in supervising the hygiene of the city. The appropriation for that department alone amounts to nearly, if not quite, as much as that for the entire Health

Department of this city. It is to be acknowledged that New York city possesses an ideal equipment in this department, including numerous laboratory assistants and a plant for the manufacture of antitoxins of various kinds.

San Francisco, with a population of close to 400,000, can hardly afford to rest quietly beneath the opprobrium of being absolutely unequipped in a branch of its Health Department so essential to the intelligent supervision over the hygiene of the city. The Bacteriological Division of New York's Health Department has recently succeeded in producing a tetanus antitoxin for successfully combating the results of infection with the tetanus bacillus. They have also prepared a diphtheria antitoxin of much greater antitoxic power than that ordinarily obtainable. These few data are cited by way of comparison and with the sole object of increasing the efficiency of the Health Department. A completely equipped laboratory could be established at a maximum cost of \$1,000.

Since it has become a well established fact that one of the principal agencies in the spread of tuberculosis consists in the inhalation of the dried and pulverized sputum from tuberculous individuals, on the part of others who are either predisposed or in a receptive condition, it becomes necessary to restrict the "expectoration habit." In New York city, expectoration in public conveyances is prohibited; in St. Louis there is the same prohibition, fortified by a warning and subsequent arrest and punishment for what is now classified as a misdemeanor. Among the many cities and towns which have taken a stand on this matter is our neighboring city of Alameda. Surely we cannot afford to be outdone in a question of so great sanitary importance as this by Alameda? If tuberculous individuals, or those whose catarrhal expectorations are a source of danger and disgust to the community, are willfully or ignorantly unmindful of the safety and sensibilities of their fellow-citizens, it seems proper that the Board of Supervisors should be advised by your Honorable Board of the danger lurking in this habit, and the necessary enactment promulgated to check the same, and thus aid in minimizing the sources of contagion from tuberculosis.

With all due modesty, it may be proper to state that some of the valuable results thus far attained by your Honorable Board looking to the purification of the food supply would not have been possible without the co-operation of one versed in the use of the microscope and the necessary technical knowledge.

In conclusion, I wish to express to your Honorable Board my deep appreciation of the confidence reposed in me. It shall always be my endeavor to be in every way worthy of its continuance, and to exert myself to second your efforts on behalf of the city's hygienic welfare, to the best of my ability.

Respectfully submitted,

JOHN C. SPENCER, M.D.,
City Bacteriologist,

CHEMIST'S REPORT.

To the Honorable Board of Health

Of the City and County of San Francisco

GENTLEMEN: Herewith as Chemist to your Honorable Body I beg to make the following statement to embody in your annual report:

That during the past fiscal year I have analyzed thirteen (13) samples of water at your request, a report of which has been submitted to you. Also, analyzes of twelve samples of Fruit Jellies obtained from Eastern, Local and Domestic make, a report of which has also been placed in your hands. I have not been idle in prosecuting the matter of Fruit Jellies, and have found Lemon and Pineapple Jellies, which do not contain a trace of these fruits, together with other jellies manufactured from decayed fruit, the decomposition products of which I deem a menace to health. I would recommend that a chemical and microscopical analysis of other articles of food be instituted to embrace such articles of food, many of which are adulterated to an alarming extent, together with Liquors, Wines and Drugs.

In order to do this work thoroughly a Laboratory, suitably equipped to do such work, is an absolute necessity.

Respectfully submitted,

W. T. WENZELL.

CITY CEMETERY SUPERINTENDENT'S REPORT.

SAN FRANCISCO, July 1, 1896.

*To the Honorable the Board of Health**Of the City and County of San Francisco—*

GENTLEMEN: I have the honor of submitting for your consideration my annual report for the fiscal year ending June 30, 1896.

Of the several societies having burial plots in the City Cemetery, there have been interred as follows :

From Italian M. B. Society.....	178	From Grand Army of Republic.....	13

I would respectfully call the attention of your Honorable Body to the dilapidated and unhealthful condition of the Twenty-sixth Street Hospital.

Time and again the City Physician's office has called the public attention to this institution, which is a disgrace to the civilized community in which we live. Years have rolled by, and time and weather have so wrecked the hospital buildings that repair is impossible, and our only alternative is a new hospital for the poor, unfortunate inmates of this institution.

Its present situation is anything but conducive to good health, for the reason that it is surrounded by filthy swamps, into which some of our sewers enter, and the effluvia is deadly.

In justice to the unfortunate outcasts who are obliged to occupy this hospital, I would recommend that your Honorable Body take some steps towards the building of a new one for contagious diseases.

Respectfully submitted,

A. P. O'BRIEN, M. D.,

City Physician.

ASSISTANT CITY PHYSICIAN'S REPORT.

SAN FRANCISCO, July 1, 1896.

To the Honorable Board of Health

Of the City and County of San Francisco—

GENTLEMEN: I have the honor of submitting for your consideration the following annual report of the City Receiving Hospital, for the fiscal year ending June 30, 1896.

The number of cases admitted from June 30, 1895, to June 30, 1896, was 6,549, averaging 545.8 a month. 456 of these cases were insane. The slight decrease of 155 cases, against the previous year, is readily explained by the smaller number of insane (456 against 521), and the strict observance of the rule to refer cases of long standing, and not in immediate danger to the various polyclinics.

Of the proposed and necessary improvements, but few could be carried out. A more spacious room on the first floor was acquired for the surgeons on duty, and preparations have been made to change the former surgeons' room into a second operating room. The surgical outfit for the latter, however, and the badly needed instruments could not be obtained for the want of necessary funds. For the same reason all efforts to procure healthier and more appropriate accommodations for the insane have proved futile, and also has it been impossible to replenish our most deficient stock of bedding and furniture.

Very respectfully,

DR. CONRAD WEIL.

CLASSIFIED LIST OF AILMENTS AND INJURIES TREATED AT THE CITY RECEIVING
HOSPITAL DURING THE FISCAL YEAR ENDING JUNE 30, 1896.

Total	80

LIVE STOCK.

Horses	12	Hogs. small.....	27
Cows.....	3	Chickens.....	47
Hogs, large	34	Ducks	9
Total.....			132

The appropriation for the use of the Almsbouse for 1895-6 was \$30,000. The Auditor's figures show that the amount paid out on the Almsbouse account was \$79,844.38, leaving a balance of \$155.62 of the appropriation to revert to the City treasury.

From the opening of the Almsbouse to the present time, 17,252 inmates have been admitted and provided with a comfortable home.

During the month of April, 1896, 19 cows and 2 bulls, having been found to be infected with tuberculosis, have been killed by order of the Health Department. Consequently an extra outlay of \$900 for milk was caused for the last two months of the past fiscal year. I beg to recommend an early purchase of at least twenty cows, being absolutely necessary for the reduction of cost of milk, as well as a necessary supply of manure for our farm.

We have raised most of the vegetables used for the board of the inmates, and the product of twenty-eight acres of potatoes. We also raised and used 2,727 pounds of beef and pork.

The necessity of building a new laundry is well known to your Honorable Board, and I hope to be able to accomplish that during the coming fiscal year, as well as make many other necessary repairs.

We supply water to an adjoining milk ranch and take in payment one can of milk (three gallons) per day, valued at 50 cents per can. Received for the sale of one calf \$6, which amount has been turned over to the City Treasurer by the present Superintendent, this being all the money received during his term of office, since May 15, 1896.

To those of San Francisco who have kindly contributed reading matter and other articles, and to the taxpayers, we return our sincere thanks.

Thanking the Honorable Board of Health and Board of Supervisors for their kind support and co-operation, we most respectfully submit the above report.

E. A. REDDY,
Superintendent.

REPORT OF MEDICAL DEPARTMENT OF ALMSHOUSE.

SAN FRANCISCO, July 1, 1896.

*To the Honorable the Board of Health
Of the City and County of San Francisco—*

GENTLEMEN: I hereby present to your Honorable Board the yearly report of the Medical Department of the City and County Almshouse for the fiscal year ending June 30, 1896:

Number of inmates July 2, 1896.....	870
Average number of inmates.....	847
Number of inmates died.....	146
Number of patients treated during year.....	4,755
Number of prescriptions during year.....	8,330
Cost of drugs, alcohol and liquors during year.....	\$1,459 99
Cost of drugs, alcohol and liquors per month.....	\$121 66 $\frac{2}{3}$

Respectfully submitted,

W. E. CONLAN, M.D.,

Resident Physician.

HOSPITAL REPORT.

SAN FRANCISCO, July 1, 1896.

*To the Honorable the Board of Health
Of the City and County of San Francisco—*

GENTLEMEN: I have the honor to submit for your consideration the following, being the forty-third annual report of the City and County Hospital for the fiscal year ending June 30, 1896.

The summary of items, as appended, will be further described in detail, as per inclosed reports.

SUMMARY.

Patients in Hospital July 1, 1895.....	266
Patients admitted in Hospital during year.....	3,422
Total to be accounted for.....	3,688
Patients discharged cured.....	1,372
Patients discharged improved.....	1,430
Patients sent to Almshouse.....	127
Patients died during year.....	465
Patients remaining July 1, 1896.....	294
	3,688
Smallest number at any time—July 3, 1895.....	254
Largest number at any time—January 27 and 28, 1896.....	380
Total number of days' treatment.....	121,952
Daily average of patients.....	332.2
Daily average of employees.....	99.36
Percentage of deaths to results.....	14.49
Percentage of deaths to total number treated.....	12.61
Average time under treatment (days).....	33.07
Cost of provisions per person per day.....	\$0.1829
Total expense per patient per day.....	0.6872
Total amount expended.....	\$82,932 11
Furnished to Smallpox Hospital, etc.....	4,779 59
Actual outlay for running expenses.....	77,152 52
Amount of appropriation.....	80,000 00
Balance of appropriation, less running expenses.....	2,847 48

BUILDINGS.

The condition of the buildings and their defects have been repeatedly alluded to in very uncomplimentary terms by former Superintendents. That they should be allowed to stand after having outlived their usefulness seems a shame and a lack of proper regard for those who are housed here as patients or officials.

The Honorable the Board of Supervisors have promised to repair the buildings and put them in as serviceable a condition as their age will warrant. It is also intended to erect a building, capable of housing twenty patients, thereby providing for the segregation of offensive and contagious cases.

As soon as these improvements have been made, the efficiency of the Hospital will have been materially increased.

NURSES.

It has been found necessary to increase the number of nurses owing to the increased number of patients. The training school, as now organized, will prove to be successful, insuring better results both to patients and nurses.

I must reiterate the statement of my predecessor, that the nurses' quarters are wholly inadequate for the purpose they are intended to serve. An appropriation should be obtained looking to their comfort, by the construction of a building sufficiently large to provide suitable living quarters and classrooms.

The number of internes has been increased from nine to thirteen, thereby insuring complete and reliable records of all cases treated, as well as better service in the wards and out-clinics.

DAILY EXPENSE.

The daily expense, as per appended report, compared with the previous fiscal year, shows a reduction to the following extent, viz.:

	1894-95.	1895-96.
Subsistence per patient per day	\$00.2653	\$00.2549
Subsistence per person per day	00.2040	00.1829
Total cost per patient per day	\$00.7242	\$00.6872

I remain, very respectfully,

Your obedient servant,

F. H. STAHL, M.D.,

Superintendent Physician City and County Hospital.

STATEMENT OF EXPENDITURES.

STEWARD'S REPORT.

SAN FRANCISCO, July 1, 1896.

*F. H. Stahle, M. D., Superintendent Physician
Of the City and County Hospital—*

DEAR SIR: I beg to hand to you my report for the fiscal year ending June 30, 1896.

The expenses have been heavy in repairs and renewal of equipment, but I anticipate a much lower expenditure next year, in view of the superior manner in which our repairs have been made and the decrease in cost of staple provisions. These causes, together with the economic changes made during your administration, if steadily pursued, will insure a very satisfactory result.

The condition of the Hospital is very well expressed in the following extract from the report of a predecessor, Mr. Coe, in 1886: "The Hospital is getting old, and almost constant repairing is necessary; in fact, there is a general decay progressing throughout the buildings; besides, the demand for the supply of bedding will be very heavy in the near future."

All our repairs have been, and shall be, substantially made, and in renewing our equipment modern ideas shall have a place, and the general and permanent improvement of the institution be the main object.

I append, for your information, a general statement of the principal repairs effected; the whole in detail would consume too much space.

In the Executive Building the officers' dining-room has been tinted, painted and grained. New tables (made on the premises) have been furnished; new window shades have been provided where needed; the closets and bath-rooms have been tinted and painted, new pots placed where necessary, tanks and valves repaired and stop-valves fitted to every tank. A new clinic room has been added, namely, the Medical Out-Clinic, and equipped with the necessary examination tables and screens, made on the premises. Both Clinic Rooms have been tinted and grained. A Club Room for the internes has been built in the basement, and supplied with matting, chairs, etc. Basement water-closets have been refitted, and much has been done to improve the sanitary condition of the building.

In the Patients' Dining-room the ceiling has been re-plastered where the plaster had fallen, the room tinted and grained, and the furniture put in good condition. The table furniture here will be modernized as quickly as funds will permit.

In the nurses' quarters a class-room has been made in the corridor, lighted by gas, large table, chairs and curtains provided; water-closets and bath-room tinted and painted, new pots placed where necessary, valves and tanks overhauled, and stop-valves fitted to every tank.

In the kitchen the ranges have been repaired, copper utensils repaired and re-tinned, new faucets fitted over sinks and many other necessary repairs made.

In the laundry the engine has been overhauled and the lost motion has been taken up. This was done by our machinist. The centrifugal separator was repaired by outside help, and the washing drums by our carpenter.

In the boiler room and machine shop we repaired the Worthington pump, put in new piston and valves in both steam and water ends, remodeled pipes of pump and boiler throughout, and effected a great saving of fuel by using hot water for feed. Furnished new lubricator for pump; put in new backstand grate-bar and bridge-wall plate, and calked tubes and seams; repaired tools, built new work-bench and laid new floor underneath.

In the wards, etc., repaired 32 water-closets, fitted 9 new Rainier and 3 Budde pots, 20 half-inch inlet valves and 20 half-inch stop valves; furnished two new coal stoves for Wards C and E; repaired and painted 32 bedsteads; re-tinted Ward N closets and bath-room; also several pantries and stairways; traced water-supply pipes, fitted stop-valves and boxed same, so as to be able to shut water off from any ward.

In the stables four new stalls were re-built and new flooring laid. Repaired sewers and laid new sewer-pipes, where necessary, as far as the funds at our disposal would permit.

The cost of the principal repairs is as follows:

Repairs to buildings, sewers, etc., including material	\$1,075 00
Repairs to laundry.....	102 43
Repairs to boiler and machinery.....	328 90
Inspection of boiler.....	25 00
Repairs to stoves and kitchen utensils.....	180 00
	<hr/>
	\$1,711 33

In view of the fact that the Supervisors promised to create a special fund for repairs, and an expert has been sent by them to ascertain their extent, I omit my list of requirements in that direction.

Respectfully

GEORGE ROBINSON,
Steward City and County Hospital.

APOTHECARY'S REPORT.

SAN FRANCISCO, July 1, 1896.

F. H. Stahle, M.D., Superintendent Physician

Of the City and County Hospital—

DEAR SIR: I herewith submit a report of the Drug Department for the fiscal year ending June 30, 1896.

Respectfully,

WM. M. HICKMAN,
Apothecary.

MILK INSPECTOR'S REPORT.

SAN FRANCISCO, July 1, 1896.

*To the Honorable Board of Health**Of the City and County of San Francisco—*

GENTLEMEN: I have the honor to submit the following report for the fiscal year ending June 30, 1896.

The work of inspection has proceeded with anything but smoothness. Numerous obstacles were encountered from the fact that dealers were unused to have their wagons stopped and adulterated milk destroyed. It gives me great pleasure, however, to state that good results have been obtained, considering the short space of time, viz., nine months, since my appointment, and considering the further fact that there is but one Milk Inspector for a city over seven miles square, and that there is no appropriation for any inspection according to a general system.

I am sorry to see that after the strenuous and untiring efforts of the Board of Health, together with the splendid results which have been produced in the inspection of milk, that the department has not met with the assistance which it deserves.

San Francisco is the only large city in the Union which has not a complete milk and food inspection department, and, unless a thorough system is established, it is almost useless to expect much improvement in the general condition of affairs as they now exist. The most necessary recommendation that can be made at this time is the opening of the four food inspection stations which have been established and should have been in operation many months ago. Considering that milk arrives in this city during every hour of the day and night, and from all adjacent counties, you will at once recognize the importance of the above recommendation. It is also a matter of grave importance, and in fact most necessary, that the department establish and maintain a laboratory in order that the proper analysis of foods can be made.

Following is a summary of work done from October 1, 1895, to June 30, 1896:

Number of arrests.....	228
Number of dairies visited.....	127
Number of samples of milk taken from wagons.....	1,722
Number of gallons of milk condemned and destroyed.....	7,280
Number of samples of milk taken from grocery stores, hotels and restaurants.....	265
Number of cows inspected.....	3,784
Number of cows killed.....	36

Respectfully,

JAMES P. DOCKERY,
Milk Inspector.

REPORT OF THE BOARD OF HEALTH

OF THE CITY AND COUNTY OF SAN FRANCISCO.

To the Honorable the Mayor of the City and County of San Francisco—

DEAR SIR: While it has not been customary for the Board of Health of this city to make or file any report of its proceedings and official conduct, other than such as is to be found in the minutes of its meetings and its correspondence, it would seem in the last degree not only proper but necessary that such a report should be made annually.

As no provision is made therefor, we have concluded that such a report should be directed to the Mayor of the city, who is not only the head of the city government, but seems to have been specially charged with attention to the matter of the public health, being made, by virtue of his office of Mayor, the President of the Board of Health.

This Board entered upon its duties of office on the 17th day of July, 1895, the day of its first meeting. A brief survey of the situation then existing will be at least significant.

The total expense of the city government for the year 1895 was over \$6,400,000. The total appropriation for the Department of Public Health in that year was \$26,000. This appropriation had remained practically stationary for about twenty-five years, during which time the population, the populated area and the city's expenses had about doubled. The law provided for the following officers of the Health Department, namely: A Health Officer, a Secretary and Assistant, six Health Inspectors, one Market Inspector and one Messenger. The Board of Supervisors, however, had appropriated sufficient money for a Plumbing Inspector and Assistant and three Assistant Market Inspectors. This was the force provided by law for the Public Health Department of a city seven miles square, containing 350,000 inhabitants.

We have attempted to indicate the deficiencies of this Department by a statement of what the Department had, rather than what it lacked, in order to bring this report within reasonable limits; but it may not, nevertheless, be improper to mention the fact that the city was without an ambulance system, and that it had no laboratory of any kind, nor any Chemist nor Food Inspector, nor any Inspector of Schools, Baths or Laundries, or Bakeries or Sewers; and that its City and County Hospital, its Pesthouse, its Almshouse and its Emergency Hospital, whose officers were appointed by this Board, were all four far from creditable to the city.

Former Boards of Health had considered that further legislation or additional appropriations were alike practically impossible, and therefore accepted what seemed to them to be the inevitable and left this Department as they found it—wretched, insufficient, disgraceful and, as they thought, hopeless of betterment. This Board believed, first, that the paramount functions of its office must be accompanied by legal powers equally great, and, secondly, that the public would approve of the appointments and sanction the appropriations necessary to safeguard the public health. And so believing, it proceeded on both of these lines of legal power and public approval to make such appointments and obtain such municipal appropriations as would accomplish this important purpose.

In its work in this regard the Board has had the good fortune to be aided, not only by its regular attorney, the late Mr. Dennis Spencer, who devoted himself to this work with earnestness and enthusiasm, and since his death by its eminent counselor, Mr. Garret W. McEnerney, but both as a friend and a private legal adviser of the Board, its work has been furthered by Mr. J. B. Reinstein and also by Mr. Isidor Jacobs, the latter of whom has been a tireless and efficient worker in the interest of the public health, and the former of whom first gave to this Board a clear and convincing exposition of its paramount legal powers in matters concerning the public health; who drew and aided the adoption of the Milk Ordinance of this city and suggested therein the plan for the four Open Public Food Inspection Stations: who indicated the line of procedure to destroy premises unfit for human occupation, and the movement for obtaining additional appropriations, and, in fact, consulted and advised with this Board almost daily on every important step it has taken since the Board was organized.

Though this Board was informed in July, 1895, that it had the legal power to make all appointments necessary for a proper Health Department, it preferred first to try to obtain the necessary appropriations and sanction from the usual channel, namely, the Board of Supervisors. Therefore, only the most necessary appointments, such as a Public Vaccinator, a Milk Inspector, a Veterinary Surgeon and a Bacteriologist, were made at once, and milk and dairy inspections were begun promptly, and the Milk Ordinance passed, with what immediate and complete success and saving of infant mortality this community is generally well aware and the records clearly show. The effective and courageous public service of the Milk Inspector, Mr. James P. Dockery, is deserving of more than passing notice. His experience has made clear the fact, not only that adulteration of food, especially milk, was general in this city, but that the present system of inspection, by one or two men, of the food coming into a city seven miles square during every hour of the twenty-four, was utterly inadequate, and that the plan of Open Food Inspection Stations at the four approaches to the City, which stations are kept open night and day, is the only method which will insure a thorough and systematic inspection of the daily food supply of the inhabitants.

With the force at first appointed, however, this Board undertook and made, not only the inspections of milk and dairies, but also the examination of dairy herds by the United States Tuberculin Tests, and the killing of tuberculous cattle, which has resulted most advantageously to this City, and also a thorough examination of the water supply of the City, taking numerous samples from all reservoirs, careful analysis of which samples indicated an excellent water supply, except in one instance, which was remedied promptly. It also undertook, and has carried to a successful conclusion and termination, the destruction of premises unfit for human occupation, and has made good, and generally appreciated in this community, the language of the public letter of this Board indicating its purpose in this behalf: "*This Board will see to it that light, SUNLIGHT if possible, and pure air, shall permeate the habitation of every human being in San Francisco, and that the dark, damp, foul places below and above ground which breed and emphasize disease, moral as well as physical shall do so no longer.*"

This work was done by calling into conference with this Board the Chiefs of the Police and Fire Departments and the Chinese Consul to aid the Board in the enforcement of sanitary regulations, especially those which had to be carried out in the so-called Chinese quarter. After considerable discussion, and the expression of some doubt as to the power of the Board to destroy premises, except after judicial condemnation thereof, an inspection of the premises sought to be condemned was made by this Board and the Health Officer,

and the Chiefs of the Police and Fire Departments, the President of the Police Commission and representatives of the Chinese Consulate, and thereafter condemnations were made by the Board in numerous instances; and, after legal notice to the tenants to vacate the condemned premises, such premises were torn down to the ground, and the cost of so doing made a lien upon the property, thus vindicating the superior right and claim of life and health over so-called property. Up to the present time twenty-eight houses have been condemned by this Board as public nuisances, of which fourteen have been destroyed by the Board, three by their owners, and the balance await destruction; while thirty-eight other houses have been inspected and will be condemned shortly. In a few instances injunction suits were brought against the Board to restrain it from destroying condemned buildings, but in every case reached thus far the plaintiff has either been beaten or has abandoned his suit, or has torn down his own premises at his own expense. These condemnations will be continued in every portion of the City as rapidly as the number of officers of this Board will permit. In this connection it may be well to note that this Board has ordered, and there is now being conducted, a house-to-house inspection of every building in this City for the purpose of determining whether all sanitary regulations are being properly carried out, such inspection being conducted by the entire Police force of this City; every officer, regular or special, having a regular beat in this City being ex officio a Health Inspector. This method is found to work most advantageously, and is practically the only one approaching anything like thoroughness and system. For the first time in the history of this City, about 500 policemen have been engaged as Health Inspectors, making a thorough and systematic investigation and report of the sanitary condition of every part of the City. During the short period of this inspection 13,147 houses have been visited and 402 nuisances abated therein, all due to such inspection. For the invaluable aid of the Police and Fire Departments of this City in the foregoing matter, too much praise cannot be given to Mr. P. J. Crowley, Chief of the Police Department, and Mr. Dennis Sullivan, Chief of the Fire Department, whose assistance and counsel have been rendered to this Board at all times and in all proper ways in furtherance of the public health.

This Board also inaugurated a system of flushing the sewers, cess-pools and gutterways of the streets at the same time, by opening a large number of hydrants at once along the line of a single street, from the top of the hill to the sewer outlet, a method which has resulted not only in cleaning the gutter-ways and the corner cess-pools, but in throwing a large volume of water through the sewers of a single street, in this way doing effective service.

From the time this Board has been in office, it has been engaged continuously down to the 21st day of September, in persistent, ceaseless and varied efforts to obtain from the Board of Supervisors of this city a sufficient appropriation for a proper Health Department. These efforts were made by letters and verbal appeals to the proper committees of the Board of Supervisors, who were addressed on that subject frequently; by correspondence with the Board itself, and with the late Grand Jury, setting forth the needs of this Department; by a public meeting of all the associations in the city, organized in the city's interest, called the Chamber of Commerce, and generally attended, which meeting and its committees were addressed by Mr. Hugh Craig, President of the Chamber of Commerce, Rev. Dr. Stebbins, Mr. Isidor Jacobs, Mr. J. B. Reinstein and others, and which meeting adopted resolutions favoring the demanded appropriation, and which resolutions, setting forth the amounts demanded, were generally signed by taxpayers, including almost every commercial bank and real estate agent, wholesaler and capitalist, and building and loan association in the city.

At no time within twenty years past was it so difficult as during the present year to

obtain such an appropriation. The tax levy for the year 1895 of \$2.25 per hundred, coupled with the long-continued serious business depression, had given the public much reason to complain, and the Board of Supervisors ground to refuse the requested appropriation.

The Finance Committee of the Board had reported against any additional appropriation, except an insignificant one; but the Board of Supervisors, rising above political considerations and public clamor, to their credit be it said, gave the appropriation asked, almost in toto, and on September 21st, the appropriation for the Health Department of San Francisco was made \$65,000 00, instead of \$26,000 00, as fixed for the year 1895, and for the first time in its history San Francisco had an appropriation sufficient for a laboratory, for chemists, for an ambulance system, and school, bath, bakery, sewer, laundry and food inspectors, a clerk of vital statistics, a bacteriologist, a vaccinator, a veterinary surgeon, a typewriter and sufficient office expenses. While at practically the same time \$10,000 00 was set apart for the repairs of the City and County Hospital, and a sufficient appropriation to permit the destruction of the ram-shackle Pest House, which has disgraced the city for many years; sufficient money for the entire and proper outfitting of the Emergency Hospital, with operating tables, instruments and materials; and for the repairing and erection of sufficient buildings at the Almshouse to make that institution more creditable to the city.

It will be understood readily that as this department had been neglected so long, this Board has rendered far more service, and its time and attention have been absorbed far more than is usual, or was to be expected, in the conduct of this office. It will not be surprising, therefore, to learn that our regular meetings have averaged about one a week, while the conferences, inspections and investigations have necessitated our daily attention since our term of office began. These conferences have been with the representatives of professions, trades and pursuits, such as physicians, nurses, merchants, milkmen, butchers, bakers, plumbers, etc.; with the various officers of the city government, with the State Board of Health, with the federal authorities in the Quarantine Service, not only by day, but by night, and frequently with the same representatives time and time again.

Our inspections have been made of the schools and of the so-called Chinese and Latin quarters and the various other portions of the city, of the Pest House, the Almshouse, the hospitals, the bakeries, Butchertown, the slaughter-houses, hog-ranches, water supply and dairies, sewer system and the quarantine service. In addition to the ordinary inspections of the City and County Hospital and the Almshouse, the former has been investigated by a special committee for that purpose during many months, and the Almshouse likewise. The investigation of the last named institution being made under and in spite of political clamor and general prejudice, in favor of the Superintendent, whom we removed despite public outcry and press criticism and Grand Jury favoritism.

In the latter part of June of this year the United States authorities attempted to take charge of the Quarantine Service in a manner we considered demeaning to the dignity of the State of California. The correspondence of this Board in that behalf will indicate that the position taken by this Board was promptly recognized as correct by the United States, as proper toward the State of California, and resulting in greater efficiency of the Quarantine Service.

The care, or rather lack of care, of the insane of this city preliminarily confined prior to final commitment, has been most disgraceful for many years. Owing to the efforts of this Board, aided by the effective and kindly service of His Honor, Judge J. C. B. Hebbard, such persons are now treated with proper consideration and humanity, and have been given vastly improved accommodations.

The long neglect of almost every branch of the Health Department has necessitated

our almost constant attention to the most pressing immediate needs of the department. These we have labored steadily to mitigate, and hope still to continue so doing, while in addition we are anxious to take up and remedy certain great forms of evil and injury to the public health, of which we have not lost sight for a moment for the past year. Notably among these will be the tracing out and locating the causes of the many cases of Typhoid Fever in this city, and the attempt to prevent so great a mortality as hitherto exhibited in the records. Also the investigation and abolition of the unsanitary conditions which result in the spread of Diphtheria among school children, but above all the putting forth of still more vigorous efforts to check the progress of Tuberculosis.

Before concluding this report, the Board desires to emphasize and invites your attention to the matter of quarantining and destroying tuberculous cattle, as being an absolute and imperative necessity for the preservation of the health of the community. Carefully compiled statistics have shown that one-seventh of all deaths in the United States are the result of tuberculosis, and this Board has recognized with humiliation and chagrin that up to this time this most insidious and most fatal of all diseases has been permitted by ignorance, apathy and a spurious conservatism on the part of local authorities to become so prevalent as to cause the City of San Francisco to be identified as one of its favorite breeding places.

The neglect and indifference to the lamentable state of affairs evidenced by officials who have presumably been gifted by nature with the intelligence to recognize, and have been vested by popular suffrage with the power to prevent and abate this blight upon our population, calls for the most bitter condemnation, and should be classed as a crime against humanity. That vigorous and impartial action is necessary has been demonstrated to a certainty since the establishment of the Dairy Quarantine and the use of Tuberculin Tests. Previous to this action of the Board, the earnest efforts and warnings of the State Board of Health had fallen on ears which heard not, and were entirely ignored by those to whom they were addressed, but so soon as the milk supply of this great city was threatened, which was done by the letter of this Board addressed to the Board of Health of every county of this State, establishing a quarantine after October 1, 1896, on all cows, and the milk from cows, not subjected to the United States Tuberculin Tests, the commercial instinct and self-interest of stockmen and dairymen of every county contributing to the supply of this city, as well as to the cities of the interior, forced them into obedience to the dictates of the health authorities.

Although reference to the report of the Secretary shows a flattering decrease in the rate of infant mortality, a fact which is in itself very satisfactory to the Board, and can be credited beyond a doubt to the establishment of milk inspection, yet we feel that the work of active sanitation has but begun, and a vast deal remains to be accomplished.

This warfare against disease and unsanitary conditions of every form will be carried still further and with more aggressiveness than before. The efforts of the Board will include the recommendation of the adoption of an ordinance prohibiting, under penalty of arrest, the habit of indiscriminate expectoration in streets and other public places, as well as other measures which will tend to educate the general public up to the proper recognition of Tuberculosis as a most fatal and infectious disease, and subject to the same regulations and same restrictions as those diseases which are now classed as dangerous and infectious, but which in comparison with Tuberculosis deserve but a fraction of consideration.
